

Divyanshu Shukla

Product Manager · Applied AI & B2B Platforms · Ex-Data Scientist

Noida, India | divyanshushuklagamma@gmail.com | +91-8318135055 | [LinkedIn](#)

SUMMARY

First Product Manager at an early-stage B2B platform, driving the 0→1 build across buyer, supplier, and ops surfaces. I take ambiguous, high-stakes problem spaces and ship structured products with measurable outcomes. Ex-data scientist; comfortable spanning discovery, system design, and applied AI.

PROFESSIONAL EXPERIENCE

NiryatAI (formerly Worldref) — B2B Cross-Border Procurement, Noida, India

First Product Manager

Dec 2023 – Present

- Spearheaded the 0→1 build of a full-stack B2B cross-border procurement platform — transitioning a bespoke, trader-led business into a standardized, platform-first workflow spanning RFQ through order execution, that buyers and sellers could trust.
- Architected the end-to-end system and workflow design across the order lifecycle — separating reversible decisions from irreversible commitments (approvals, PO issuance, pricing locks) at each stage to prevent costly reversals and protect buyer trust; structured around three cold-start bottlenecks: buyer reliability, supplier liquidity, and ops leverage.
- Designed AI-assisted supplier matching optimized for **precision over recall** with ground-truth and offline eval to tune thresholds, lifting supplier response rates from **15% to 35%**; held human-in-the-loop boundaries where errors carried irreversible risk; built supplier liquidity from the ground up via capability-ingestion pipelines that grew the active base from **~180 to ~1,400**.
- Designed **7+ live AI systems across the procurement lifecycle** — spanning RFQ extraction and standardization, document validation, classification, and visual QC — with human review gated to high-consequence decisions.
- Designed buyer-side Procurement-as-a-Service (PaaS) monetization — rule-based PaaS fees paired with an ML-based fulfilment-charge model — replacing ad-hoc, deal-by-deal pricing with a transparent system that reduced buyer distrust and eliminated manual vendor-quote collection.
- Cut **time-to-first-confident-quote from 5 days to 2 days** and reduced **post-PO escalation rate by 22%**; built the metrics framework that separated leading quote-quality indicators from the lagging RFQ→PO conversion north-star.
- Scoped, sequenced, and detailed an **18-month, 6-initiative roadmap** — owning the initiatives, workflows, and sequencing; two are AI-led: a post-order ops copilot (**90+ user stories**, with a per-action autonomy gradient and eval gating each capability) and a separate risk & delay-prediction system on a personally-built **120+ risk taxonomy**.
- Managed one APM: owned the roadmap, user stories, and AI design decisions while they executed on PRDs, design, and delivery; front-loaded the 'why' and impact context before handing off work — raising decision autonomy and cutting rework.

Civil Services Preparation (UPSC) — Full-time self-directed

Oct 2021 – Dec 2023

Merilytics — Data Science Consulting, Hyderabad

Data Scientist

Jun 2021 – Oct 2021

- Built hybrid ML + rule-based freight routing model, cutting logistics costs by ~8% across key lanes and reducing high-density scheduling conflicts via Gantt/heatmap dashboards.

SIDE PROJECTS

LectureSnap — Solo-built and shipped an end-to-end AI study tool (Chrome extension + web app + API): converts lecture videos into structured study PDFs via hierarchical model routing, with credit-based monetization and a 106-mode failure catalog evaluated offline by an out-of-family LLM judge. Built as sole PM and developer. [GitHub](#)

EDUCATION

Indian Institute of Technology, Kanpur — B.Tech, Mechanical Engineering

2021

SKILLS & TOOLING

Product & Execution: Product Discovery, PRDs, System & State-Machine Design, Roadmapping, Metrics & North-Star Framing, Autonomy Gradient Design, Cross-functional Collaboration, Sprint Planning, APM Management

AI & Data: Applied LLM Systems, Embeddings & Semantic Matching, Prompt & Context Design, Eval Design & Ground-Truth Curation, Human-in-the-Loop Governance, RAG, Failure-Mode Analysis, SQL & Data Modeling

Domain: Cross-border B2B procurement, marketplace liquidity & trust, AI workflows

Tools: Jira, Figma, Notion, Confluence, Postman, Amplitude, Mixpanel, Claude Code, Python, SQL, AWS, Power BI
